## ATLAS Roof Lantern

ATLAS have combined good looks, outstanding strength and intelligent detailing, to create one of the finest looking aluminium products available for conservatory, orangery and extension installations.

### Features and benefits of ATLAS lantern roof

- Ensures a fast high quality installation : Contemporary lanterns can be installed in as little as 10 minutes.
- The ridge and rafter are the thinnest on the market at 40mm
- Unique tie bar system available in 3 varieties
- Roof pitch available from 17 degrees to 35 degrees (Stock Roof Lanterns 25 degrees only)
- Thermally broken ridge and rafter, with a 1.5 W/m<sup>2</sup>K U-Value when double glazed, this reduces to just 0.95 W/m<sup>2</sup>K with triple glazing.
- Available in triple glazed option.

### STOCKED COLOUR OPTIONS

INTERNAL RINGBEAM  
RINGBEAM WIDTH 67MM

INTERNAL KERB

EXTERNAL KERB

RINGBEAM DRIP

KERB\*

67

**Please note** - Accurate surveying is key to ensuring correct manufacturing sizes and a trouble free installation. The surveyor is responsible for ensuring that structural openings and surrounding areas are sound or in a good state of repair should the lantern be installed into an existing roof.

Unlike conservatory roofs, ATLAS Roof Lantern sizes are derived from external kerb measurements. ATLAS Lantern Roofs have a unique drip feature which aids ease of weathering.

- Decide on size required then cut and frame opening with appropriate kerb which must not exceed  $0.35 \text{ W/m}^2\text{K}$
- Ensure kerb is square by measuring the diagonals. If not square then reinstall kerb so that squareness is achieved
- Measure the external size for both width and depth of kerb (see illustration)
- Fill in appropriate order form noting all details

\* Supplied by other

If you require any help or advice when surveying an ATLAS Lantern Roof, just ask in branch where they'll be happy to help.

External Kerb Size †	Clear/Neutral/Blue
1000 x 1000	£550
1000 x 1500	£690
1000 x 2000	£860

## How to survey an ATLAS Flat Rooflight

**Please note** - Accurate surveying is key to ensuring correct manufacturing sizes and a trouble free installation. The surveyor is responsible for ensuring that structural openings and surrounding areas are sound or in a good state of repair should the rooflight be installed into an existing roof.

ATLAS flat rooflights are designed to take a 12.5mm internal plasterboard to achieve a frameless look.

- Decide on size required then cut and frame opening with appropriate kerb
- Ensure kerb is square by measuring the diagonals. If not square then reinstall kerb so that squareness is achieved
- Fill in appropriate order form noting all details

If you require any help or advice when surveying an ATLAS Flat Roof, just ask in branch where they'll be happy to help.
